Contents

4 tokens - 200 cards - 1 Card Holder (Box)

SPOILER ALERT

Do not turn over the cards before playing...

The two-sided cards feature a question on the front side and its corresponding answer (a value ranging from 0 to 10) on the back side.

Objective:

Estimate answers, add them up, and aim to get as close as possible to a total of 21 without going over!

Setup

➡ Form **teams**.

Note: We recommend teams of 3 players max.

➡ Choose a team to shuffle the deck. Take **20 cards**, shuffle them and place them in a single pile between all teams, question side up.

Round of Play

1 The team that shuffled starts the game by reading the question on the top card of the pile. They must **estimate** the answer and say the number out loud.

Reminder: the answer is a value from 0 to 10.

2 Without looking at the answer on the back of the card, they show the value **to the other team(s)**.

Then, they take the card and place it in front of them, question side up.

I think it's 10.

More like 7...
Let's say 8!

NUMBER
OF BABIES IN
A SINGLE BIRTH

Ok, wow!

Play continues clockwise with each team repeating these two steps.

1 They read the new question from the top of the pile and **estimate** the answer.

2 They **show** the answer to the opposing team(s) and place the card in front of themselves.

Following Rounds

➔ Each team keeps track of the **sum of the estimated values** of the cards they take.

We say 10
for the giraffe.

We think we
have 18 in total.

➔ **Starting from the third round**, a team may choose not to take a card after reading it, if they believe its answer will cause their total estimated values to exceed 21. They are done playing until the end of the game.

Whoa, that's at
least 6 seasons...

18 + 6 would
make 24.
Let's stop!

- ➔ When one team decides not to take a card, the next team continues playing with **the same question**.

End of the game

The game ends as soon as all teams have stopped taking cards. The team that stopped first, turns over their cards and **adds up all actual values**. Then, the other teams do the same.

Want to play a series of games? Try the **Super Blind Jack!**

Each game:

➔ The winning team (closest to 21 without exceeding it) scores **2 points**.

➔ The losing team(s) score **0 points** if they go over 21 or **1 point** if under 21.

The first team to reach **3 points** wins the series! If multiple teams reach 3 points at the same time, play a tiebreaker game.

Instant Win Rule: Any team that hits **exactly 21** wins immediately!

Card statistics

9 cards each, with values 0 and 10

18 cards each, with values 1, 2, 8 and 9

22 cards each, with values 3, 4, 5, 6 and 7

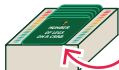

Average value of a card **5**

Tip 1

To make it easier to track each team's total estimated values, use a **colored token** and move it along a numbered score track on the card holder box. Advance your token as your team acquires cards.

Tip 2

The game box doubles as a **card holder**.

Place your cards

in the holder with the question sides facing the players. Lay the first card horizontally for easy reading.

Tip 3

At the end of the game, insert your used cards into the **back**

of the card holder, with the question side facing the **back** of the box.
